

IMAGING, INDEXING AND STORAGE

Richmond Monroe has paired its imaging, indexing and storage capabilities with The Mountain Data Center. We can offer maximum security for all of your documents on-site using our vault or through the Mountain Data Center. The Mountain Data Center is actually a man made mine that is bored out the side of a mountain and mined upward and is situated above ground helping to create a higher air quality without moisture issues that underground facilities have. The Mountain Data Center has built firewalls throughout, and installed the latest non-halogenated fire suppression agent, exceeding every fire code for records storage and computer rooms.
